

Hot Dog

Design & Diagrams by Gerwin Sturm (2006/03/15)

Start with a square, sausage-side up, bun-side down, and follow the Ketchup line.

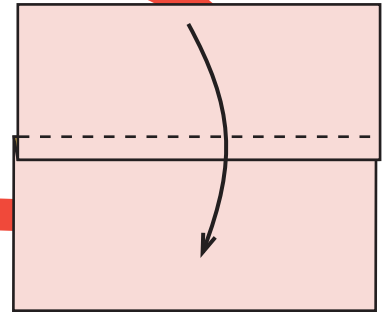

1. Fold in half to get a nicely symmetric Hot Dog.

2. Fold one layer up in front choosing the thickness of the sausage.

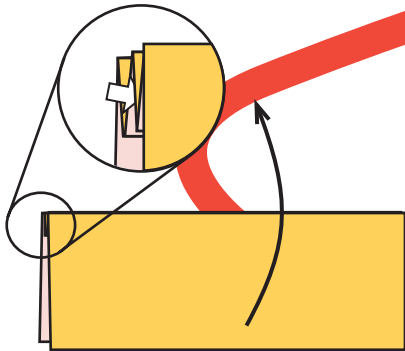

Note:
This will be half the thickness of the sausage.
For economical reasons you will get a smaller bun if you want a bigger sausage.

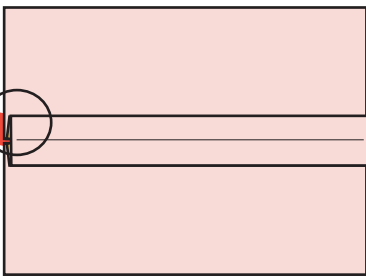

3. Fold down again along the edge behind.

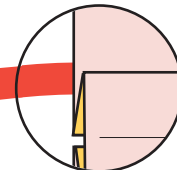

4. Repeat steps 2 & 3 behind symmetrically to the front.

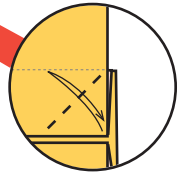

5. Open the model symmetrical. (See close-up)

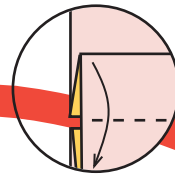

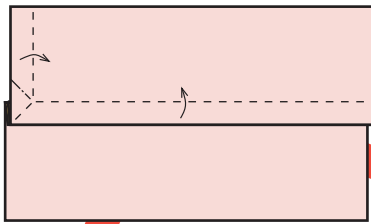

6. Voila, the sausage is ready. The next steps will focus on the circled area.

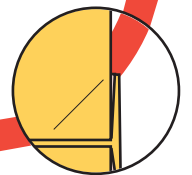

7. Turn over.

8. Fold and unfold the corner.

10. Swing the flap down.

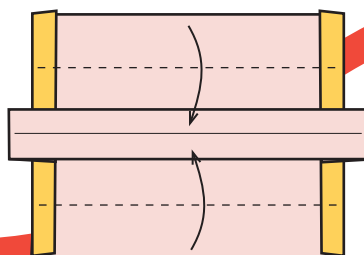

9. Turn over.

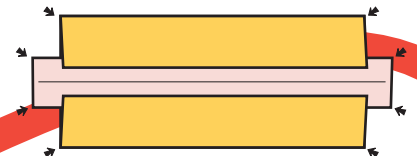

11. Fold the raw edge to the right while swinging the flap back up. Collapse using the creases made in step 8. Zooming out for better overview.

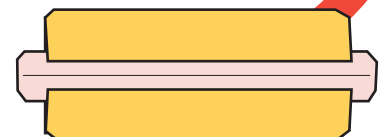

12. Repeat steps 7-11 on the other three sides.

13. Wrap (i.e. valley fold) the bun around the sausage.

14. Shape the bun and sausage with reverse or mountain folds.

15. The finished Hot Dog. Enjoy :-)
